Overview

Smart glass vision panels for commercial & domestic doors

The most common usage for switchable glass & film is to create privacy windows or doors. Wherever there is glass (or acrylic, or Plexiglass), it can be made into instantly switchable privacy glass.

Switchable privacy also offers an alternative to blinds and curtains, removing visual clutter and also removing the need to dust and clean them. This is particularly important for bi-fold doors, which often comprise of multiple large panels of glass, making privacy a top concern for end users. Switchable glass bi-fold doors eradicate these problems all together, replacing standard glass that is commonly used for this purpose. Our cabling solutions ensures a neat setup, with all cables fixed in place securely when the doors are open, and discretely hidden once the doors are closed.

And, ultimately of course, switchable privacy glass adds an interior design wow factor that blinds and curtains just can't match.

So, please do get in touch if you have any questions, or want to discuss your ideas for using switchable glass for privacy windows & doors.

Features

- Fire rated switchable vision panel system
- Push button switch & low battery indicator
- Installed at manufacture or retrofit kits
- Custom panel sizes & shapes made to order

Benefits

- Battery powered, no mains required
- No external wires
- Low power warning LED
- Simple Installation
- Low maintenance with 2-year battery life

Applications

- Healthcare
- Education
- Offices
- Furniture
- Privacy pods/ Study rooms
- Health Spas
